

HOSSEIN GHARIBZADEH

Frontend Engineer — React / Next.js / TypeScript

Karaj, Iran | +98 910 340 3931 | shervan.dec@gmail.com | github.com/ShervanGharibzadeh | linkedin.com/in/h-gharibzadeh

PROFESSIONAL SUMMARY

Frontend Engineer with 3+ years of experience building and owning production web applications in React, Next.js, and TypeScript. Strong focus on performance under heavy computation and large datasets, reliable data fetching and caching, scalable component architecture, and UI quality control through visual regression testing. Experienced in secure, role-based interfaces (JWT, RBAC, MFA flows) and in working closely with backend teams on Spring Boot and NestJS APIs in Agile environments. Looking to bring this engineering approach to data-intensive financial products.

CORE SKILLS

Languages	TypeScript, JavaScript (ES6+), HTML5, CSS3
Frontend	React.js, Next.js 14 (App Router, Server Components, SSR/ISR), Redux, Zustand, React Query, Tailwind CSS, MUI, shadcn/ui, Ant Design
Performance	Core Web Vitals, Lighthouse Profiling, Render Optimization, Lazy Loading, Bundle Optimization, Caching Strategies, PWA (Service Workers, Offline Support)
Quality & Tooling	Storybook, Chromatic (Visual Regression), GitHub Actions (CI), ESLint/Husky, Git, Docker, Vite, Webpack, Vercel, Netlify
APIs & Security	REST API Integration, Spring Boot, NestJS, Node.js, JWT Auth, RBAC, MFA Flows, Zod Validation
UI/UX & Motion	Framer Motion, DnD Kit, Swiper.js, Responsive Design, RTL & i18n, Accessibility

WORK EXPERIENCE

Frontend Developer | Economican — Istanbul, Türkiye (Remote)
Sep 2025 – Jan 2026

- Led the refactor of core CMS components, improving maintainability and cutting unnecessary re-renders through targeted performance optimizations.
- Replaced separate per-category implementations with a single parent component that automatically routes each category to its own rendering logic, significantly reducing code volume and simplifying category management.
- Architected a scalable menu system on top of the category-driven model, increasing content flexibility across the platform.
- Implemented PWA capabilities (offline support, caching strategies) that improved reliability on low-connectivity networks.
- Contributed to an AI-powered chat analysis tool for financial/trading insights, building the frontend experience and supporting backend service logic that integrates external data providers.
- Worked with backend engineers on Java Spring Boot REST APIs (validation, response mapping, role-based access control) for CMS and user-interaction features.

Frontend Developer | Maltina — Alborz, Iran
Aug 2024 – Aug 2025

- Migrated 250+ components from Emotion to Tailwind CSS, reducing bundle size (verified with Lighthouse), improving long-term maintainability, and enabling platform-wide dark mode.
- Introduced visual regression testing with Storybook and Chromatic to catch unintended UI changes before release.
- Adopted React Query across the application to cache server state and eliminate redundant requests, improving data-fetching performance and synchronization.
- Designed and built a dynamic, multi-section survey system that increased user engagement and data-collection capability.
- Delivered internationalization (i18n) with next-intl, extending the product to global users.
- Partnered with the backend team on Java Spring Boot APIs (debugging, contract alignment, performance profiling), helping resolve N+1 query and payload-bloat issues.
- Raised the code-quality bar with Git hooks (Husky) and custom ESLint rules; contributed to GitHub Actions workflows; advised teammates on UI implementation and survey architecture.

Frontend Developer | PiRun — Istanbul (Remote)

Jan 2023 – Jan 2024

- Improved web performance by 50% (validated with Lighthouse) by managing heavy computations and large data volumes more efficiently, alongside PWA optimization, lazy loading, and WebP image conversion.
- Built installable PWA experiences with service workers and offline caching support.
- Developed real-time chat and chatbot interfaces using React, Redux, and Firebase.
- Elevated UI polish and reusability with Framer Motion and a modular component architecture.

Frontend Developer | Freelance — Tehran, Iran

Sep 2021 – Aug 2022

- Built a web application for small shops as part of a 4-person team, from architecture through delivery.
- Implemented Next.js SSR and bundle-size reductions that improved load times and user experience.
- Delivered responsive, production-ready UIs using React.js, Tailwind CSS, MUI, and Sass, with basic PWA support for mobile usability.

SELECTED PROJECTS

Afraav — Secure Cloud Platform

- Built a secure cloud platform using Next.js 14 and TypeScript, implementing MFA, encryption, and role-based access control (RBAC). Developed a responsive UI with MUI and Framer Motion, including complex drag-and-drop workflows using DnD Kit. ravinsec.ir

KashCoo — Admin & Commerce Dashboard

- Developed a mobile-first, full-RTL admin dashboard integrated with NestJS (JWT auth, RBAC), including secure API handling and request interception. [kashCoo](https://kashCoo.ir)

Issue Tracker — Kanban Board

- Built a Trello-style task management app (Next.js 14, DnD Kit, Framer Motion) with scalable state management and production-ready UI interactions.
